⚡ Accommodating Businesses

Striking utilities while installing charging stations can be expensive, dangerous, and harmful to a company's reputation. CNI Locates helps to minimize the risk of subsurface damages and compliments your efforts to confirm the viability and placement of your desired EV charging location. Let CNI Locates be your one stop shop for subsurface damage prevention.

CNI Locates understands the costs of redesign and project delays. That's why CNI Locates guarantees to be on site within 24 hours of scheduling a service with us (Monday - Friday). Your team will have that warm fuzzy feeling knowing that all subsurface infrastructure is accounted for so that your designs are accurate, and your construction teams can be reassured during the construction phase.

Installing electric vehicle (EV) charging stations is becoming more common for private businesses and franchises. When you are installing charging stations on your property, precautions must be taken to protect the existing subsurface utilities from damaging strikes. CNI Locates technicians are equipped with all the necessary equipment (Ground Penetrating Radar, Electromagnetic Transmitters/Receivers, Push Video Cameras, Sondes, and more) to prevent subsurface damages.
