Video Pipe Inspections

Video Pipe Inspection is a service used to inspect underground sewer, drainage, water lines, empty conduits, etc.. Video Inspections are a vital tool for investigating cross bores, structural faults, damages, clogged pipes, etc.. CNI Locates uses push cameras & CCTV pipe crawlers to assist our customers needs.

Wastewater Treatment

Wastewater treatment facilities can present many challenges when performing subsurface work. As a critical facility, utilities and other subsurface structures must be protected during subsurface work. CNI Locates technicians have all technology to help prevent any subsurface damages.

Water Distribution & Collection

Spanning long distances, water and sewer pipelines can have many potential subsurface utility crossings. During the installation of water and sewer pipes, subsurface utilities must be located. CNI Locates can also locate utilities prior to subsurface work when repairing or replacing existing water and sewer lines. Striking utilities while installing sewer or water can be expensive, dangerous, time consuming, and harmful to a companies reputation. CNI Locates helps to minimize the risk of subsurface damages and compliments your efforts to confirm the viability and placement of your desired work area.
